

CLAIMS

1. (Cancel)

2. (Amended) A post formation laminar assembly comprised of: [of a type having] a textile material with interior and exterior surfaces, a [non-permeable] polymeric layer[,] overlying the exterior surface, and a backing layer[,] overlying the polymeric [non-permeable] layer, that were [are] laminated together [with the laminated product] and postformed in a molding apparatus, [the improvement characterized by:] with the polymeric layer having a post formation permeability of 500 rayls or less as measured by concentric airflow resistance equipment.

3. (Amended) A vehicle sound insulating carpet assembly [structure] comprised of: [a type having] a carpet [assembly] member with face and interior surfaces [and], a polymeric layer overlying the interior surface, [and] sound insulating material overlying the polymeric layer, [the improvement characterized by:] and means for fixing the carpet member, polymer layer and insulating material together in a [the] carpet assembly structure having a permeability of no more than 500 rayls as measured by concentric airflow resistance equipment.

4. (Cancel)

5. (Amended) A[n] post formation assembly comprised of: [a type having]
a panel with interior and exterior surfaces, a polymeric layer[,] overlying the exterior
surface, and a backing layer[,] overlying the polymeric layer, that were laminated together
[with the laminate] and post formed in a molding apparatus, with the [improvement
5 characterized by:]

[a] post formation panel having a permeability of 500 rayls or less as measured by
concentric airflow resistance equipment.

6. (Amended) A vehicle carpet assembly having [with] face and interior
surfaces [and] with sound insulating material affixed adjacent the interior surface [carpet
assembly characterized by:]

[the carpet assembly having] and a permeability of 500 rayls or less as measured by
5 concentric airflow resistance equipment.
